

A Better View. With Quality Service.

Isn't it time you replaced those energy-wasting windows?

The warmth that escapes through your windows during the colder months accounts for up to 25% of your annual heating bill. At London Renovations, we exclusively use one of the top eco-friendly window brands on the market: Vinylbilt. Designed for Canada's harshest climates, their high-quality products are engineered to provide as much as 40% more insulating value than your existing windows, keeping your home more comfortable, and saving up to 18% on energy costs. The company's leading-edge glass also saves water -- not to mention labour -- by using the sun and rain to help keep the exterior surface clean.

Nor do you have to sacrifice beauty for energy-efficiency -- these windows feature a variety of attractive frame styles as well as no-haze glass that boasts better visibility and clarity than competitors' brands. What's more, more than 40 years of quality craftsmanship and a zero defect commitment on the manufacturer's part, plus London Renovations' team of skilled, fully-certified contractors add up to a worry-free investment that will pay dividends for decades to come. Better yet, we're offering a special low-priced package for a limited time, so take advantage of this window of opportunity and book your Spring installation today.

See your way clear to greater convenience, comfort, and quality.

Choose the window product that best suits your home's needs – installed at a special low price.

CLEAN CONVENIENCE

Our Standard Simply-Clean® exterior coating actually helps keep your windows clean. Here's how it works: the sun's UV rays decompose and loosen dirt, dust, and other organic deposits so rain will wash them away. The special, ultra-smooth surface also allows water to flow off smoothly and evaporate quickly, inhibiting the formation of water spots.

YEAR-ROUND COMFORT

Low-emissivity (LoE) glass is coated with a material that reflects the sun's heating rays during the summer, but allows them to pass through during the winter, yet lets light stream in. Some products feature three layers of coating, which keeps as much as 64% of unwanted heat from entering from outdoors, and retains 98% of the heat or cold inside. This triple-layer technology also keeps both the exterior and interior surfaces of the glass at similar temperatures, controlling humidity.

CERTIFIED QUALITY

All of the windows we use are CSA approved, manufactured with the finest materials and workmanship, and backed by Vinylbilt's exclusive lifetime warranty. And London Renovations' team of reputable, reliable professionals makes installation as tidy, and trouble-free as possible.
